About the math

If you try to verify our computations using the numbers in these tables you might get different results. The logic is explained here.

An average is the sum of views divided by the number of days.

We exclude days prior to the first recorded view and future days.

Today (May 7) is excluded from averages because it isn't over yet.

Yearly averages are computed from sums, not an average of monthly averages.

Averages are rounded to the nearest integer for display.

Gray zeroes are exactly zero. Black zeroes have been rounded down.

Percent change is computed from weekly averages before they are rounded.
